

Week 4 — Milestone 1: Coder

You built a pipeline over 3 weeks. Today it runs on a problem it has never seen. The question is not "can you write code" — the question is "does your system work without you."

 by Alwin Lin

Before anything else:

- `problem_set_week4.py`
 - Drop-in replacement for `problem_set.py`.
 - Contains Problems 1–4. Problem 4 is the unseen milestone problem.
- `run_cases_week4.py`
 - Drop-in replacement for `run_cases.py`.
 - Handles Problem 4. Rename to `run_cases.py`.

What Does this week do?

- Does the system run without manual help?
- Does it score well on the hidden cases?
- Is it robust and clean?
- Are there cases that you didn't account for?
